PROFESSIONAL SUMMARY

Software engineer with **4+ years** across enterprise authentication systems, full-stack development, and AI-assisted engineering workflows — establishing documentation, tooling, and delivery processes where none existed. Actively working at the intersection of **agentic AI development and practical software delivery**: prompt engineering, multi-agent workflows, MCP server integration, and deterministic agent architecture. Combines enterprise-grade operational discipline with the adaptability of someone navigating industry disruption head-on.

SPOKEN LANGUAGES

- English (Native)
- Urdu/Hindi (Native)
- Punjabi (Native Understanding)
- Spanish (Conversational)

TECHNICAL SKILLS

TECHNICAL

AI-Assisted Development

Codex (CLI, VSCode, Desktop App), Claude Code, Gemini CLI, Claude, Gemini, ChatGPT, Google Anti-Gravity · MCP server integration · Prompt engineering · Agent architecture (persistent memory, multi-agent workflows) · Agentic problem-solving patterns

Languages & Frameworks

Node.js, TypeScript, JavaScript, Python, C# (exposure) · React, HTML/CSS · FastAPI, Flask · Django (exposure)

Databases & APIs

SQL Server · PostgreSQL (exposure) · GraphQL, REST APIs · Apigee · EDI file processing & B-view mapping

LLM Models & Tooling

Claude Sonnet 4.0–4.6, Opus 4.6 · Gemini 2.5–3.1 · GPT o4–5.4 · Kimi 2.5 · Gemma 4 · Dolphin 3 · Llama 3.3–4.0 · DeepSeek R1 · Qwen 2.5 · Ollama CLI · LM Studio

Cloud & DevOps

AWS (ECS, EC2, CloudFormation, CloudWatch, Secrets Manager, SSM, RDS, S3, IAM) · Docker · Terraform · GitHub Actions (implementing) · Jenkins, TeamCity · Git/GitHub

Security

mTLS, OpenSSL, certificate management, deploy keys · SSO/IAM systems · Enterprise authentication architecture

LEADERSHIP & DELIVERY

Project Management

Agile/Kanban Scrum practices · SAFe Certified (2023) · Jira · Rally · Standup facilitation · Sprint lead, reviews & retrospectives · Change management ticketing · Soft launch planning

Communication & Training

Stakeholder demos & walkthroughs · Cross-functional team facilitation · Technical training delivery · Dev-to-business translation

Documentation

Technical SOPs · User guides · Database architecture docs · Data flow diagrams · Deployment runbooks · README generation · Knowledge transfer from zero-documentation environments

PROFESSIONAL EXPERIENCE

Systems Developer II

Industry Data Exchange Association (IDEA) · Richmond, VA

2025 – Present

Generalist contributor on a small product engineering team building the Data Whispers business intelligence platform — a multi-stack system spanning a Django/React customer UI, a .NET data ingestion service, and a legacy SQL Server data pipeline with no prior documentation, no automated deployments, and no defined SDLC at the time of joining.

- Built a custom **NetSuite widget in vanilla JavaScript** that reduced customer data load times by **90%** for the Customer Success team — eliminating multi-minute page loads by scoping data retrieval to recent call history and eliminating irrelevant legacy records spanning decades.
- Established the company's **entire technical documentation library from scratch** across two product systems where zero documentation previously existed — producing database architecture guides, data flow diagrams, deployment SOPs, ingestion process runbooks, user management procedures, EDI mapping references, and README files for two application repositories using AI-assisted tooling including Codex CLI and MCP server integration.
- Resolved multiple **production bugs** in the User Management and Pre-Validation systems: bulk role file upload failures, null ID assignments on customer and entity records, incomplete cascading deletes from the database, and duplicate data generating false positives and incorrect row counts in the pre-validation error report.
- Designed and built the initial **Pre-Validation report template and file loading interface** for the customer data ingestion pipeline — defining the layout, rule application logic, and error display structure subsequently refined by the lead developer.
- Contributed the **React frontend view** for an internal TypeScript/Node import tracking tool that monitors customer file movement through the company FTP pipeline and connector system — built alongside the lead engineer, who completed backend refinement.
- **Migrated the development team from AWS CodeCommit** — which had accumulated **560+ branches** with no strategy — to GitHub with a standardized PR workflow, branching conventions, and commit practices; delivered hands-on training sessions for the full dev team.
- Managed the Scrum board and **facilitated daily standups across two project teams** from September 2025 through March 2026 — coordinating change management tickets, bug tracking sheets with targeted delivery dates, and a soft launch milestone to move the Data Whispers platform into dev and production environments.
- Collaborated with the EDI domain expert to **diagnose and resolve customer file import errors** — including updating B-view field mappings and deploying corrected configurations to the Connector ingestion system.
- Actively applying **AI-assisted development workflows** across the role: Codex CLI and VSCode extension for codebase interrogation and documentation generation, prompt engineering for structured output, and MCP server integration to accelerate knowledge transfer from undocumented systems.
- Currently **leading CI/CD infrastructure implementation from scratch** using GitHub Actions — designing a phased pipeline covering build, test, artifact packaging, secrets externalization, and automated deployment for both the Django/React and .NET application stacks with no prior automation baseline.

Security Specialist

2024 – 2025

[Accenture \(embedded at General Electric\)](#)

Continued enterprise SSO services and authentication system maintenance across multiple GE business units during GE/Accenture organizational transition.

- Maintained comprehensive SSO services across GE Corporate, GE Vernova, and GE Aerospace during organizational restructuring
- Implemented advanced security protocols and best practices for enterprise-scale authentication systems
- Collaborated across Accenture and GE teams to ensure continuity of secure, scalable authentication infrastructure

Software Engineering Specialist — SSO Team

2021 – 2024

[General Electric Company](#)

End-to-end SDLC team member maintaining 14 mission-critical SSO APIs serving 80,000+ employees, contractors, and B2B customers across GE Corporate, GE Vernova, and GE Aerospace.

- Architected and delivered **14 SSO APIs** in **11 months**, modernizing 15+ year legacy Java systems during simultaneous identity provider, database, and codebase migrations
- Achieved **99% uptime** since production deployment, serving **50,000+ users** across three major business units during historic GE corporate restructuring

- Independently operated entire enterprise SSO infrastructure for **10 months** as sole remaining developer during GE/Accenture transition — maintaining critical authentication services for Fortune 500 manufacturing operations without service interruption, while also running daily standups, sprint reviews, and quarterly retrospectives
- Optimized API performance from **seconds to milliseconds** by implementing GraphQL for large dataset queries and directory operations
- Implemented mutual authentication (mTLS) architecture using OpenSSL, Terraform, and Envoy, securing internal API traffic with manual annual certificate rotation
- Modernized CI/CD infrastructure by migrating from Jenkins to TeamCity, creating streamlined deployment pipelines with custom build scripts and templates for **all three GE business units**

Technology Apprentice

2021 – 2022

MAXX Potential

Accelerated career development program providing technical support across VA/NC region.

- Completed rigorous apprenticeship program in record time — **6 months** vs. typical 1–3 year duration
- Gained hands-on experience with enterprise software development teams and Agile sprint methodologies
- Successfully placed on GE assignment, leading to full-time software engineering role

Owner / Operator

2015 – 2020

HerbNCurry Catering Solutions

Built and operated a specialized catering business from the ground up while completing an undergraduate degree.

- Grew from startup to **155 events annually** at peak, achieving **\$64,800 revenue** in highest-earning year (2019) through strategic client acquisition and operational discipline
- Managed end-to-end solo operations: client relations, menu planning, logistics, inventory management, and on-site chef services for events up to **20 guests**
- Achieved **80%+ repeat business rate** and consistent 5-star feedback through systematic quality control and client relationship management
- Business ceased operations in 2020 due to COVID-19 pandemic, precipitating strategic transition into technology

TECHNICAL PROJECTS

Pocket Professor

2024 – Present

Adaptive Learning Platform for Career-Switchers · TypeScript, Node.js, PostgreSQL, GitHub Actions

- **V1 (2024):** Built an AI-powered personalized syllabus generator deployed on personal site — users input target subject, goal type, experience level, and weekly availability; system produced structured learning plans with daily tasks, weekly portfolio projects, suggested reading, and a capstone. Validated with initial beta users.
- **V2 (2025–present):** Redesigned from scratch as a deterministic adaptive learning platform specifically targeting **service industry workers (35+) transitioning careers** — a domain informed by 15 years of personal industry experience. Built around the core constraints of the audience: inconsistent schedules, fatigue, burnout, and high attrition risk.
- Architected a **multi-agent backend** (onboarding agent, professor agent, career coach agent) with strict agent contracts, schema validation, and policy-gated output — agents suggest, policies decide, events verify, system adapts deterministically.
- Implemented **fail-closed audit persistence** for structural mutations, append-only behavioral event store, weekly structural change caps, and full audit trail — ensuring reliable, reproducible learning plan adaptation without LLM unpredictability.
- Built using **AI-assisted development workflow** throughout: Codex CLI for implementation, soul.md agent architecture for persistent context, multi-agent collaboration patterns for complex feature design.
- Currently in pre-pilot hardening phase targeting a micro-pilot with real service industry workers.

Additional projects: Arduino nodebots (Johnny-Five library) · Raspberry Pi retro gaming systems · Hardware security research (Flipper Zero) · Home lab Docker infrastructure · Network monitoring and alerting systems

AWS Cloud Practitioner (2023)

SAFe® Scrum Master (2023)

Coding Dojo Red Belt (2021)

AWS Certified AI Practitioner — In Progress

Full-Stack Development Bootcamp

Coding Dojo · 2021

Intensive 14-week program covering HTML/CSS/JavaScript, Python, MERN stack, and Java. Built full-stack applications including a Google Maps clone and travel planning CRUD application.

B.S. Experimental Psychology

University of Texas at San Antonio · 2018

Research focus: "Cross-Cultural Stressors of Adolescents in Bi-Cultural Upbringing" · UTSA Community Garden Project (steering committee, 2016–2018) · UTSA Green Society Officer 2015-2018
